ABSTRACT

FOCUSMATE AI

FocusMate AI is a web-based productivity and study management platform developed to provide users with a convenient system for organizing and managing their tasks and daily activities from a single place. The platform allows users to create, organize, and prioritize tasks based on deadlines, categories, and importance. It provides features such as task management, focus sessions, productivity tracking, study planning, and personalized AI-based recommendations. By bringing multiple productivity-related features together, the project provides an organized and user-friendly platform for improving time management and maintaining consistent productivity.

The application allows users to create and manage tasks, set deadlines and priorities, organize activities into categories, track completed tasks, and conduct focused study sessions. Users can view their tasks through an interactive dashboard, monitor their progress, analyze their productivity, and plan their study activities. The system also helps users break larger goals into smaller and actionable tasks, making their work more manageable and structured. The simple interface enables users to navigate through the platform and access different productivity features easily.

The system is initially developed using **HTML, CSS, and JavaScript**. HTML provides the webpage structure, including task sections, dashboards, forms, navigation, and productivity information. CSS creates a clean, responsive, and user-friendly design. JavaScript provides interactive features such as task creation, task filtering, progress tracking, focus timers, navigation, and other interactive elements. The system can be further enhanced using backend technologies, databases, and artificial intelligence to provide personalized productivity recommendations and assistance.

The proposed system provides a practical digital solution for managing tasks, study activities, and personal productivity through a single platform. By combining task management, focus tracking, productivity analysis, study planning, and AI-assisted recommendations, FocusMate AI reduces the difficulties involved in organizing daily work and helps users develop consistent productivity habits. The project also demonstrates the practical application of modern web development technologies for creating a structured and personalized productivity management system.
